

SPINNING REEL SOUND PRODUCING MECHANISM

ABSTRACT OF THE DISCLOSURE

A sound producing mechanism for a spinning reel includes a first sound producing
5 portion that is coupled to a spool shaft and has an attachment portion and a plurality of
saw tooth portions that are formed in a saw tooth shape circumferentially apart on an outer
peripheral surface of the attachment portion; and a second sound producing portion that is
attached to the spool and includes a pawl member that repeatedly comes into contact with
10 the saw tooth portions to produce sound. The first sound producing portion is mounted to
the spool shaft so as to be unrotatable when the spool rotates in a line releasing direction
and rotatable when the spool rotates in a line winding direction. The pawl member is
urged toward the saw tooth portions by a spring member. The spinning reel sound
producing mechanism produces sound only when the spool rotates in the line releasing
15 direction.
